PTT line for Drake L-4B PA

By G8MNY

THE PROBLEM
If wired directly to a IC735 Tx send connector, the IC735 reed relay contacts weld up with the linear relay's back emf.

**MY CURE**
Not wishing to modify either pieces of kit, I chose to find a simple fool proof solution in the inter connecting lead.

To stop the back emf & inrush current to the IC735's reed relay SEND contact, I added a 35V 4u7 in series with a 100Ω across linear's PTT 2 pin plug.

Recently overhalled the PA & modified the PTT relay with the usual diode across it, to stop all relay back emf.

Why Don't U send an interesting bul?
